

# 3

## REASONS WHY USERS ARE A POTENTIAL CYBERSECURITY RISK

---

Find out more

# 1. PHISHING

**95% of cyber incidents involve human aspects.** This makes Phishing one of the biggest threats to an organisation. Education and security awareness training is key to prevent this.

## 2. ACCESS

**A user's account is the front door to an organisation's internal systems.**

Typically, the longer someone has been at an organisation, the more access they will have accumulated.

### 3. REUSED PASSWORDS

A huge **62% of people always use the same password.** If a user gets breached on a third party app and they are reusing this password, the risk to the their corporate account increases.
